SwineTrack POS: A Point-of-Sale & Inventory System for Meatshop ABC

Second Term, Second Semester SY 2025-2026

Submitted by:

Pablo, Lourde Vincent M.

Peguit, Jonathan Jr H.

Submitted to:

Prof. Jenny Espadero, MIT

I. Project Context

A. Introduction

Background of the Company

Meatshop ABC is a family-owned business and was established in November 2023, the small merchandising business has become a growing patronage making the village outdoors for meat nearby. It is located inside the village of Dahlia St. Sabroso Vill Davao City making it accessible for consumers inside the community, especially during some circumstances. Over the years, the fine business runs the transaction with a good quality of produce and regular service for the whole community, building the trust and love of its diverse customers. This constant workflow of the business has given a change and growth making a space for the area a source of meat producers.

Transactions of the Company

The process of Meatshop ABC transact through two main procedures. Firstly, it engages direct contact to a piggery picking the chosen brute. Secondly, the business owner has its own domesticated pigs wherein they slaughter, this transaction is optional if the first producer were not able to provide the supply. Both approaches have a similar process of slaughtering the brute which is the regular slaughter house for proper sanitary processing before the distribution of sales. After the slaughtering process, the meat is cleaned, cut into different pork parts like liempo, kasim, ribs, and other parts, and prepared for selling.

Inventory Process

The inventory of Meatshop ABC is managed manually using logbooks. Each stock-in transaction is recorded with the following;

- **Date** – The exact date when the meat is received or processed
- **Source** – Supplier (piggery) or own livestock
- **Product Type** – Type of pork cut (e.g., liempo, kasim, ribs, pata)
- **Quantity (kg)** – Total weight per product type
- **Cost per Kilogram** – Purchase or production cost
- **Total Cost** – Overall expense for the stock

a. Stock-In Process

a.1. Acquisition of Live Pig

The owner either:

- Purchases a pig from a supplier (piggery), or
- Selects from their own domesticated pigs

a.2. Slaughtering Process

The selected pig is brought to a registered slaughterhouse where it undergoes proper and sanitary slaughtering procedures.

a.3. Inspection and Quality Check

After slaughtering, the meat is inspected:

- Checked for freshness (color, smell, texture)
- Ensured cleanliness and proper handling
- Verified that the meat is safe for selling

Any issues in quality are addressed immediately.

a.4. Cutting and Preparation

The meat is processed into different pork cuts:

- Liempo
- Kasim
- Ribs
- Pata
- Belly

These are prepared for display and selling.

a.5. Recording of Stock-In

The owner records the stock-in details in the logbook:

- Date
- Source (supplier or own livestock)
- Product type
- Total weight (kg)
- Cost per kilogram
- Total cost

a.6. Storage and Display

The meat is properly stored and displayed:

- Organized by type
- Placed in clean and sanitary conditions
- Stored in freezers when necessary

a.7. Inventory Update

The inventory is updated manually by adding the new stock:

Example:

- +40 kg Liempo
- +25 kg Kasim

b. Sales Process

b.1. Customer Order

Customers request specific pork cuts and desired quantity (e.g., 1 kg of liempo).

b.2. Weighing and Pricing

The product is weighed using a weighing scale, and the total price is calculated:

- $\text{Weight} \times \text{Price per kilogram}$

b.3. Recording of Sale

The transaction is recorded manually:

- Date
- Product sold
- Weight (kg)
- Price per kilogram
- Total amount

b.4. Payment Handling

Customers may pay using the following method:

- Cash payment (full payment upon purchase)

b.5. Daily Sales Summary

At the end of the day, the owner:

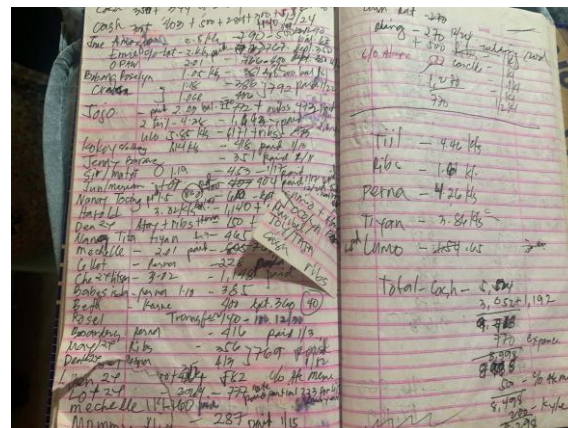

- Calculates total cash sales
- Estimates profit and losses

B. Problem

Despite the current system of the business operation, the current system adopted by the business is recording the sales in logbooks to which it is causing a scattered and/or forgotten record. The business does not have a real-time inventory tracking for the pig products, which resulted to overstocking or running out of supplies. The manual managing of product price and updates are also managed manually, which may lead to inconsistencies during transactions. There is no automated computation of the total sales and income compromises the financial

C. Solution

D. Document Analysis

PETTY CASH VOUCHER		
PAID TO:	NIDA	
ADDRESS:		DATE: March 17, 2016
PARTICULARS	AMOUNT	
BABOY 10kg X 165	16,50	
TOTAL @ P=	16,500	
Approved for payment:	Received payment: NIDA Requib

II. Objectives of the Study

This study will develop a Meat Shop Point of Sale (POS) system with the following objectives:

1. To implement a stock-in module that records incoming products and automatically updates inventory levels in real time.
2. To design a sales processing module that enables fast and reliable transaction handling, including receipt generation.
3. To generate a sales report that provides information about the daily transactions and sales performance.
4. To provide a product and price management feature that allows add, edit, and update product details and prices consistently.
5. To maintain organized digital records of sales and inventory transactions for easy tracking and retrieval of past records.

II. Scope and Limitations of the Study

This study focuses on developing a stock-in and Point-of-Sale (POS) system for small meatshop businesses, especially Meatshop ABC, and includes two main parts: the stock-in module and the sales processing module. The stock-in module records incoming products such as type, quantity, cost, and source, and updates the inventory automatically, while the sales

processing module handles daily transactions by allowing the user to select products, enter quantity, compute the total price, and generate a receipt. The system will have sales activity to record the sales transactions. The system also provides simple sales reports to help monitor daily transactions. However, the study is limited to the basic operational needs of a small meatshop. It does not include, customer management, customer credit or “utang” tracking, online ordering, barcode scanning, expense tracking, accounting features, or integration with external payment systems. The system also does not use Artificial Intelligence features such as sales forecasting.

III. Conceptual and Logical Design

A. Business Rules

1. A **User** can record zero or many **Batches**, and each **Batch** must be recorded by exactly one **User**.
2. A **Supplier** can supply zero or many **Batches**, and each **Batch** may be linked to at most one **Supplier**, or none if the source is own livestock.
3. A **Batch** must contain one or many **BatchItems**, and each **BatchItem** must belong to exactly one **Batch**.
4. A **Product** can appear in zero or many **BatchItems**, and each **BatchItem** must be linked to exactly one **Product**.
5. A **Batch** can have zero or many **Sales**, and each **Sale** must belong to exactly one **Batch**.
6. A **User** can process zero or many **Sales**, and each **Sale** must be processed by exactly one **User**.
7. A **Sale** must contain one or many **SaleItems**, and each **SaleItem** must belong to exactly one **Sale**.
8. A **Product** can appear in zero or many **SaleItems**, and each **SaleItem** must be linked to exactly one **Product**.
9. A **Product** must have exactly one **Inventory** record, and each **Inventory** record must track exactly one **Product**.
10. A **Sale** must have exactly one **Payment**, and each **Payment** must belong to exactly one **Sale**.
11. A **Category** can classify zero or many **Products**, and each **Product** must belong to exactly one **Category**.

B. Triggers

Batch Item Trigger

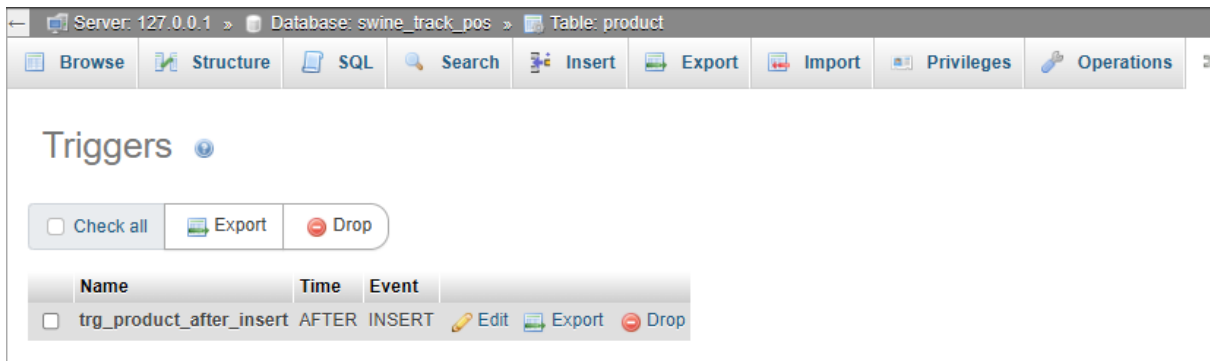

Triggers

☐ Check all

	Name	Time	Event	
☐	after_batch_item_update_status	AFTER	UPDATE	Edit Export Drop
☐	after_batch_item_update_sync_inventory	AFTER	UPDATE	Edit Export Drop
☐	trg_batch_item_after_delete	AFTER	DELETE	Edit Export Drop
☐	trg_batch_item_after_insert	AFTER	INSERT	Edit Export Drop

- marks non-closed batches Sold Out when all items are zero, or Open when quantity exists.
- syncs inventory totals after batch item quantity/product changes.
- syncs inventory totals after item deletion; now also recalculates batch status.
- syncs inventory.current_stock_kg to total batch item quantity for the product; now also recalculates batch status.

Product Trigger

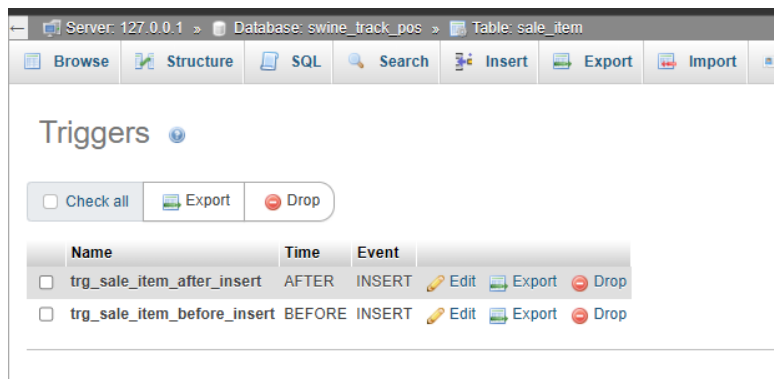

Triggers

☐ Check all

	Name	Time	Event	
☐	trg_product_after_insert	AFTER	INSERT	Edit Export Drop

- creates a zero-stock inventory row for each new product.

Sale_item Trigger

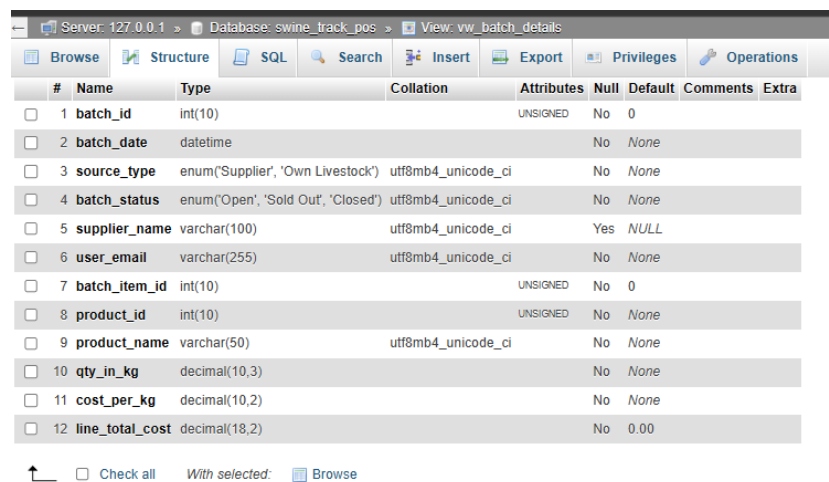

Name	Time	Event
☐ trg_sale_item_after_insert	AFTER	INSERT
☐ trg_sale_item_before_insert	BEFORE	INSERT

- deducts sold quantity from batch_item.
- validates sale quantity, price, inventory stock, and batch stock.

C. Views

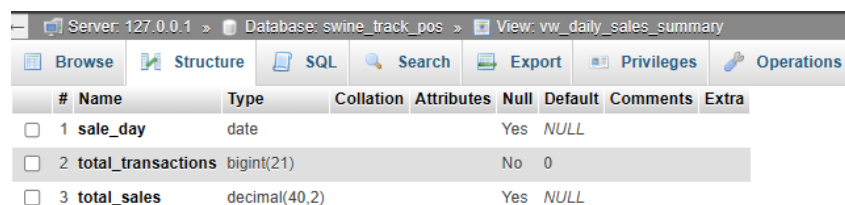

Batch Details View

Supplier Directory

A simpler table layout for scanning suppliers quickly without losing the important details.

View keeps the full profile, while the table stays focused on the essentials.

Supplier ID	Supplier Name	Contact Person	Phone	Email	Status	Deliveries	Last Delivery	Actions
S004	Green Pastures Livestock	Joel Navarro	02121312312	dispatch@greenpastures.test	Active	0	-	 
S001	Metro Cuts Trading	Ana Ramos	09171234567	ana.amos@metrocuts.test	Active	1	13 Apr 2026, 06:00 AM	 
S002	South Valley Hog Farm	Marco Dela Cruz	09179876543	purchasing@southvalley.test	Active	0	-	 
S003	North Ridge Meats	Liza Santos	09175557777	-	Inactive	0	-
